

AsyncCodeBench exposes dependency closure and coordination delay

DeepSeek V4 Flash Qwen3.6-27B Gemma 4 26B-A4B

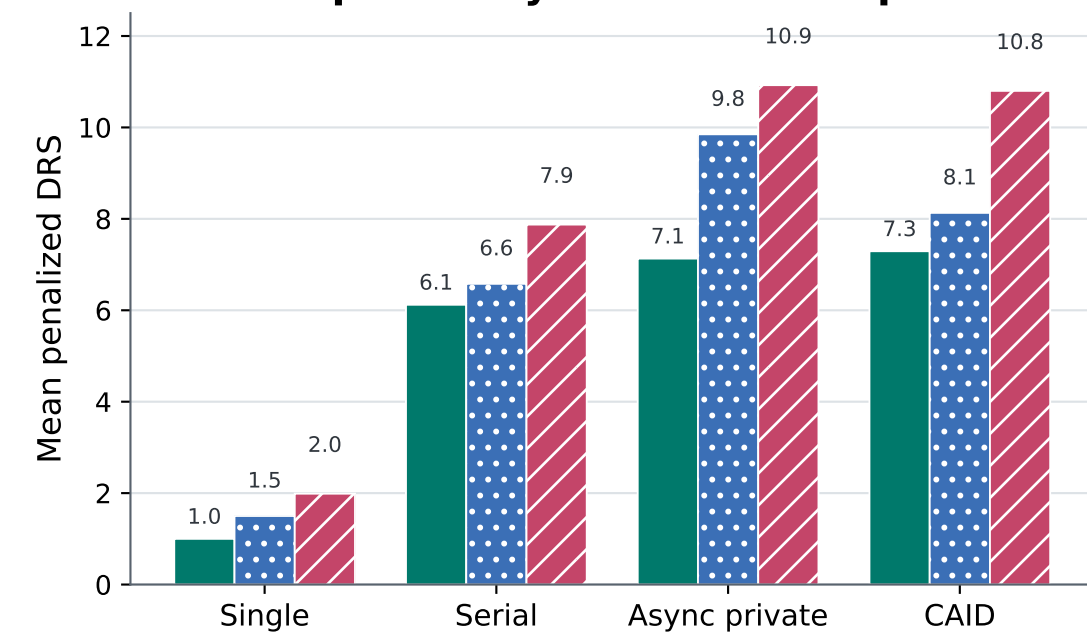

Final dependency closure ↑

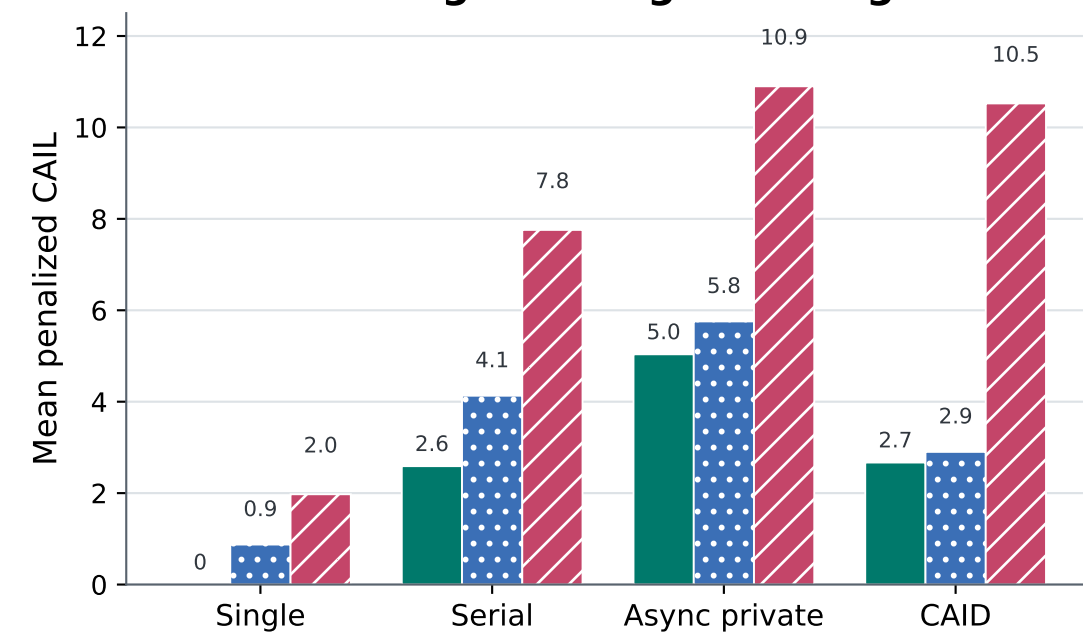

Dependencies left unresolved ↓

Dependency resolution step ↓

Cross-agent integration lag ↓

ADPR: higher is better; unresolved count and penalized DRS/CAIL: lower is better. DRS unresolved = $T + 1$.
CAIL = $\max(0, \text{downstream} - \text{upstream})$ when observed; otherwise $T + 1 - \text{upstream}$ or $T + 1$. Qwen is a valid-bundle mixed-lineage descriptive aggregate.
