

# Coordination diagnostics separate local-model failure modes

Qwen3.6-27B Gemma 4 26B-A4B

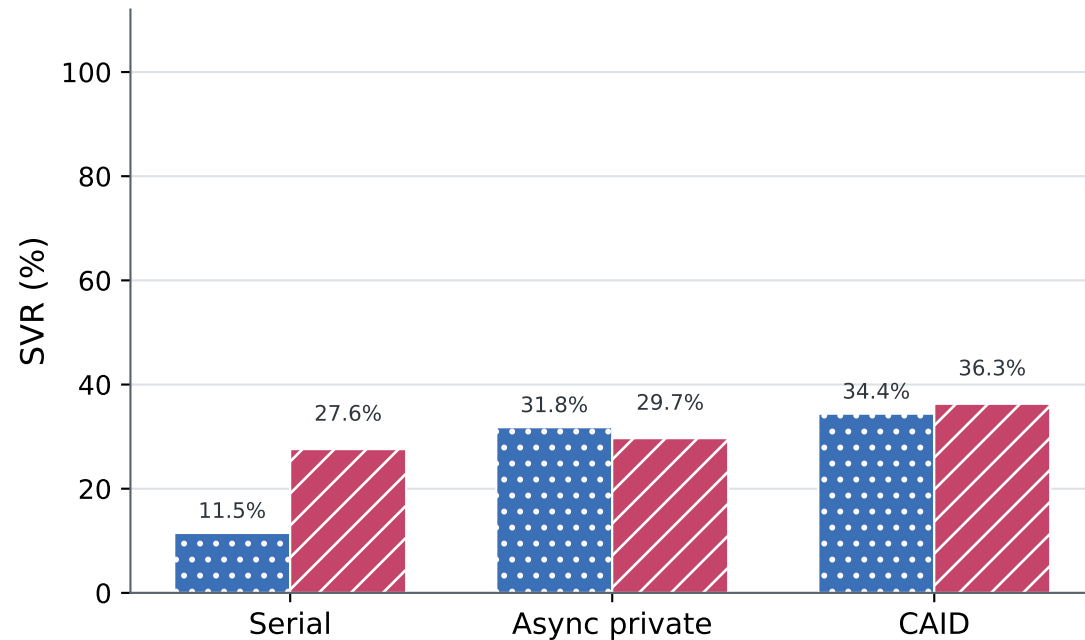

## Failed subagent attempts (lower is better)

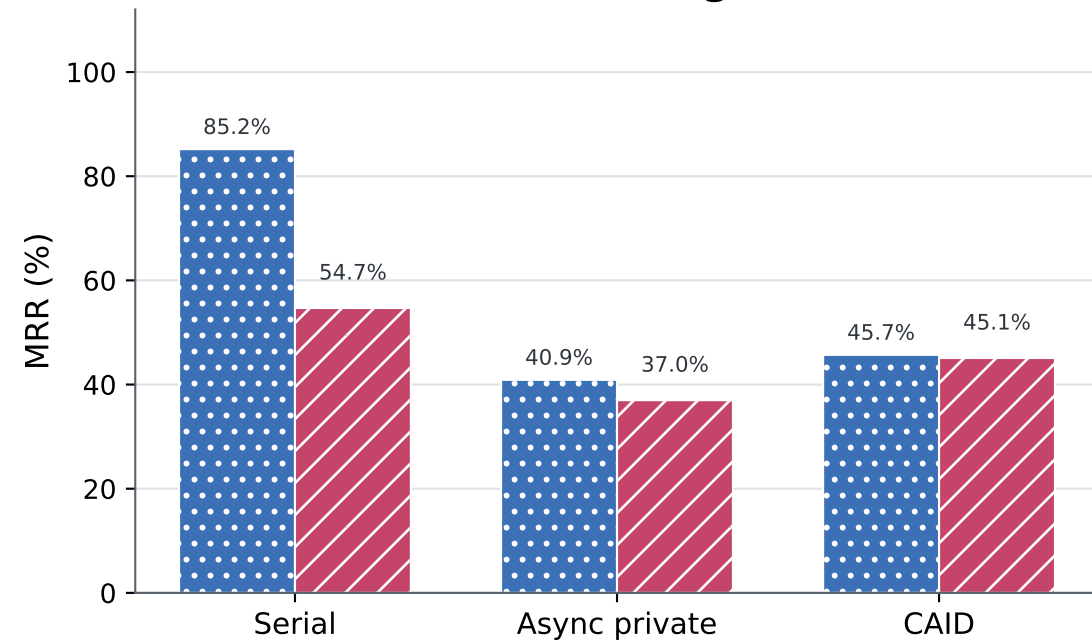

## Integration failure (lower is better)

## Writable-scope violations (lower is better)

## Manager recovery after failures (conditional diagnostic)

Lower FSAR/IFR/SVR is cleaner; MRR is conditional. Qwen is a valid-bundle mixed-lineage descriptive aggregate.
