

TVM coordination metric dashboard

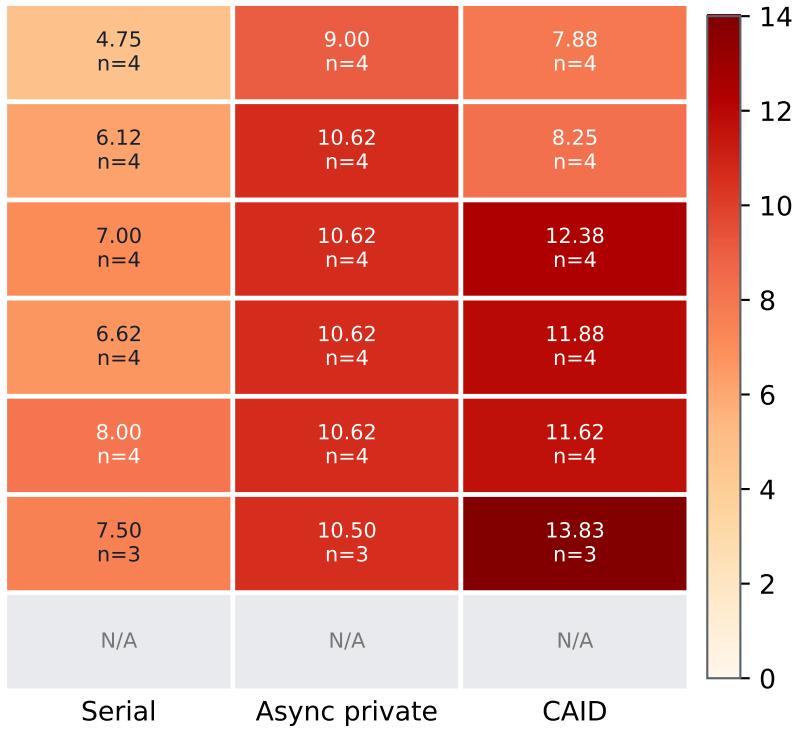

Resolution efficiency — DRE ↑

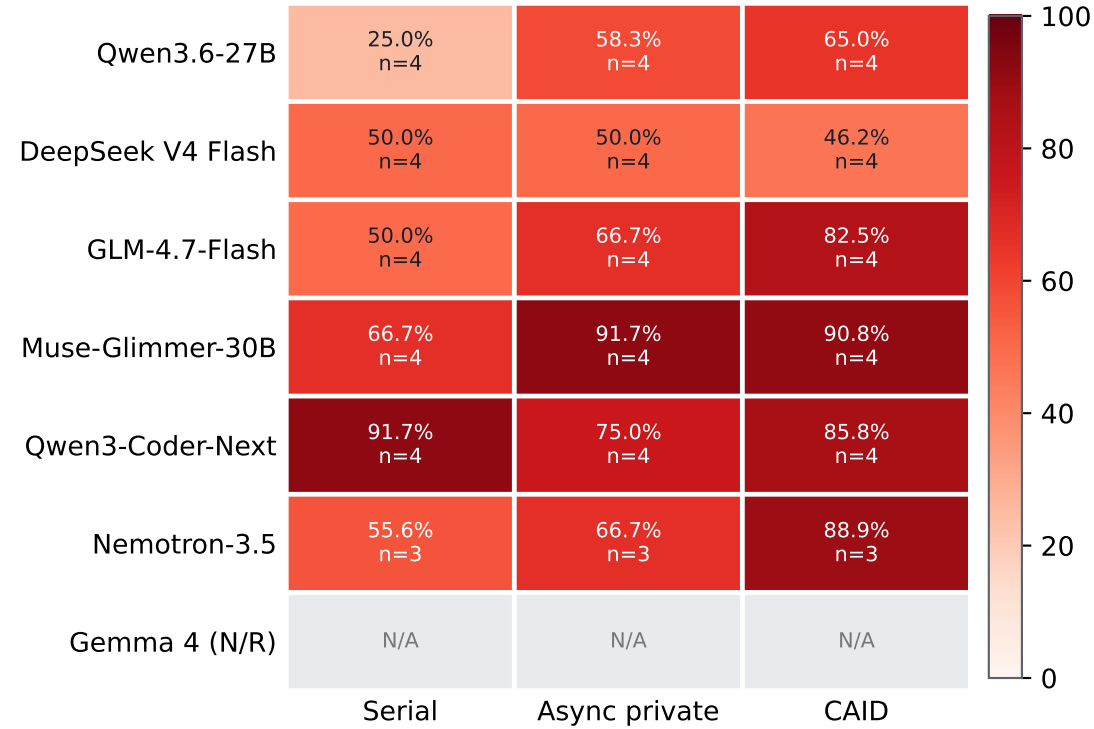

Resolution step — DRS-P ↓

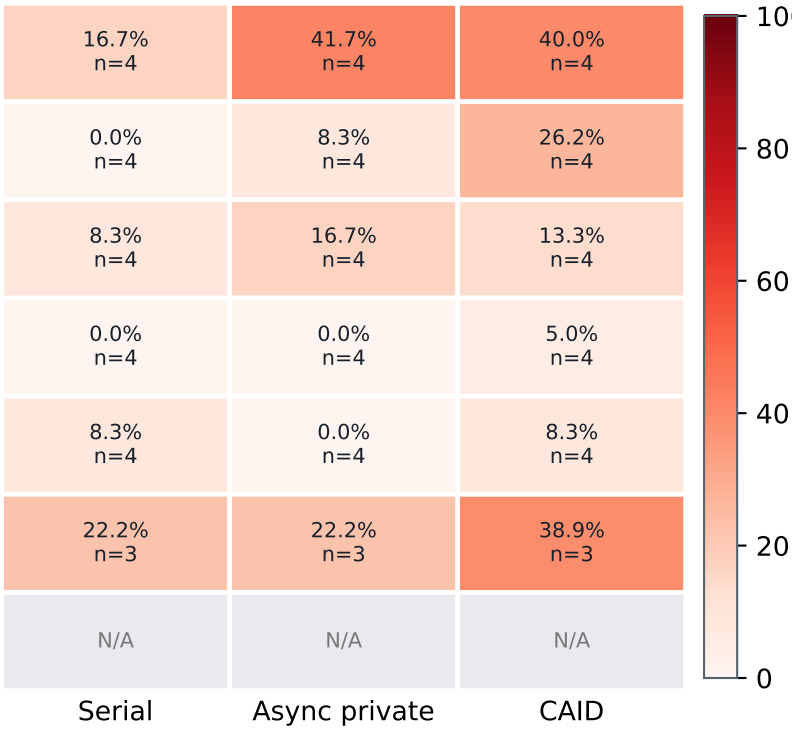

Integration lag — CAIL-P ↓

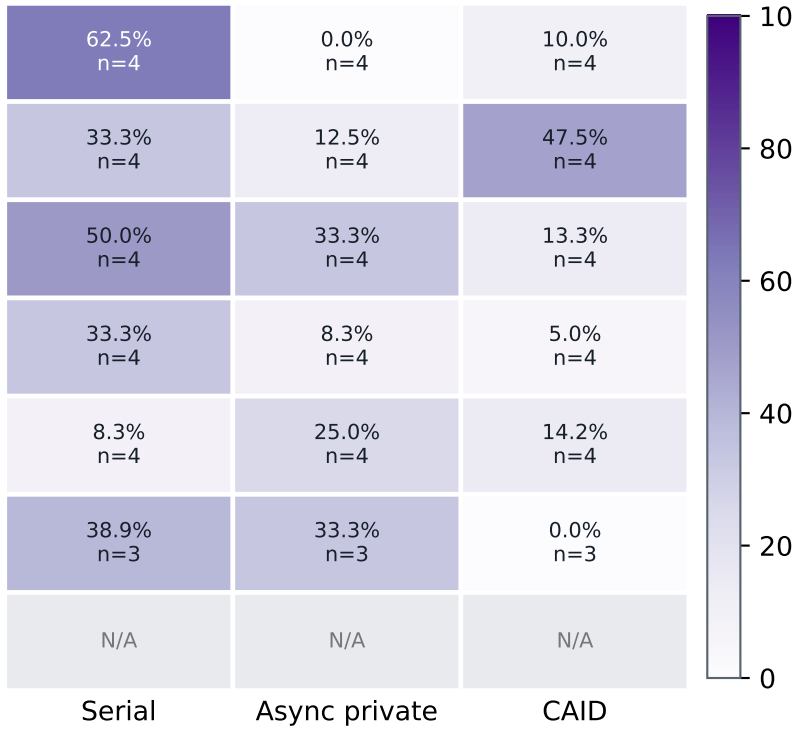

Failed attempts — FSAR ↓

Scope violations — SVR ↓

Manager recovery — MRR ↑*

↑ higher is better; ↓ lower is better. MRR is conditional on recovery opportunities and must be read together with FSAR. IFR is omitted because every selected multi-agent aggregate is 100% under the current run-level definition.

Four official TVM tasks; one selected run per model-task-protocol cell. CAID denotes the manager-mediated condition: historical local and current read-only OpenRouter action spaces differ. Gemma has no TVM run; Nemotron is missing three TVM-20018 multi-agent cells.
