

Best observed outcome for each TVM task

Best final evaluator pass rate ↑

Best final ADPR ↑

Cell suffix gives the best protocol: S=Single, SER=Serial, AP=Async private, MGR=Manager; ★ marks full task success.

Four official TVM tasks; one selected run per model-task-protocol cell. CAID denotes the manager-mediated condition: historical local and current read-only OpenRouter action spaces differ. Gemma has no TVM run; Nemotron is missing three TVM-20018 multi-agent cells.
